PROPOLIS - Fantastic Discovery
- - - - -

Bees can restore our Health.

Danish beekeepers have recently had the opportunity to increase their earnings. They have been scraping propolis off frames and cover boards of their hives and carefully collecting it.

One beekeeper is reported to have earned over 500 dollars in this way in the season 1972. This use of propolis as a medicine has fairly caught on in Denmark and two well-known drug companies are marketing propolis.

Nature's own Medicine. In the Danish Weekly "Dansk Familieblad" No. 42, 1972, there is a five page article devoted to the qualities and use of propolis as a medicine. In the county of Holbeck, at a meeting of beekeepers, many of those present were able to give accounts of the successful use of propolis in the treatment of various diseases.

The propolis is sold in granule form and other forms, and can be chewed, sucked, or simply swallowed.

Now, what about the Division being the first to create a PROPOLIS Bank ?

I am told that propolis is selling in Japan at the very enhanced price of \$300 per lb !!
